In contrast to failures caused by software errors, the outages caused by physical defects are usually longer and more costly. The Kentix MultiSensor® technology offers the ideal solution for the physical protection of your IT infrastructure. It detects all major physical threats at an early stage and alarms you before expensive outages occur.

Kentix products are completely IT based and integrate smoothly even into distributed IT infrastructures. Close a gap in your IT security with Kentix and fulfill regulatory requirements such as the ISO 27001. Avoid liability risks!

Kentix system solutions replace several single systems and therefore save up to two-thirds of the otherwise usual costs. The following systems are already integrated:

- Climate monitoring
- Intruder detection system
- Early fire protection
- Current and network monitoring
- Access control system
- Server live check

Possible applications:

- Server room, data center and IT cabinet
- Mission-critical infrastructure
- Industrial sites
- Office and administrative buildings

STARTERSET-PRO-1 - PROTECTS YOUR IT ROOMS IN ACCORDANCE WITH THE ISO 27001

AlarmManager, MultiSensor-LAN and MultiSensor-DOOR

The ingeniously easy Kentix MultiSensor® technology detects up to 37 physical threats with just one system.

Complete software included, apps available · Secure remote opening and management via Kentix Cloud · Central control unit with radio, LAN and GSM · Monitors up to 20 physical threats

The monitoring solution for any application
