Kentix.com

With the Kentix DoorLock®, you only need two base components in order to set up a complete online access system: The web based Kentix AccessPoint as a central control unit and an online door opener.

The special feature of the Kentix online access system is the specifically easy networking and smooth integration into IT networks. With the Kentix360 Cloud, the system can be administrated from anywhere and at any time. Remote management is also possible if required.

The modification is simple and can be done without cabling or special tools. Due to the concept of a system building kit, the DoorLock offers the matching product for all purposes.

The access control system with video recording

The unlocking of a door with an RFID medium can also trigger an IP camera which records a sequence of pictures. These pictures are saved together with the user data. Unauthorized access attempts are immediately forwarded to the system administrator via email with the pictures attached.

Possible applications:

- Office or administrative rooms
- Industrial sites, production or storage halls
- Container sites and distributed properties
- Server rooms, data centers and IT cabinets

STARTERSET-DOORLOCK – THE INGENUOUSLY EASY ENTRY SOLUTION FOR YOUR GATEWAY TO ONLINE ACCESS CONTROL

AccessPoint, Online Door Knob and Master Card Set

ENTIRE SOFTWARE ALREADY INCLUDED – NO ADDITIONAL COST!

Access simply IP connected – with the ingeniously easy online access control system for professional users

Who has access where and when? Manage access easily – including video recording. With few components and little mounting effort, small and large projects can be implemented cost-efficiently.

With the AccessPoint ① and an online door opener ② an entire remote controllable access solution can be set up without great mounting efforts.

The access solution for any application

Avoid outages before they occur - network based environmental monitoring for professional users

Our MultiSensor® technology protects your IT infrastructure against up to 37 physical threats such as over temperature, burglary or fire with just one system - that is what makes Kentix so ingeniously easy.

In contrast to failures caused by software errors, the outages caused by physical defects are usually longer and more costly. The Kentix MultiSensor® technology offers the ideal solution for the physical protection of your IT infrastructure. It detects all major physical threats at an early stage and alarms you before expensive outages occur.

Kentix products are completely IT based and integrate smoothly even into distributed IT infrastructures. Close a gap in your IT security with Kentix and fulfill regulatory requirements such as the ISO 27001. Avoid liability risks!

Kentix system solutions replace several single systems and therefore save up to two-thirds of the otherwise usual costs. The following systems are already integrated:

- Climate monitoring
- Intruder detection system
- Early fire protection
- Current and network monitoring
- Access control system
- Server live check

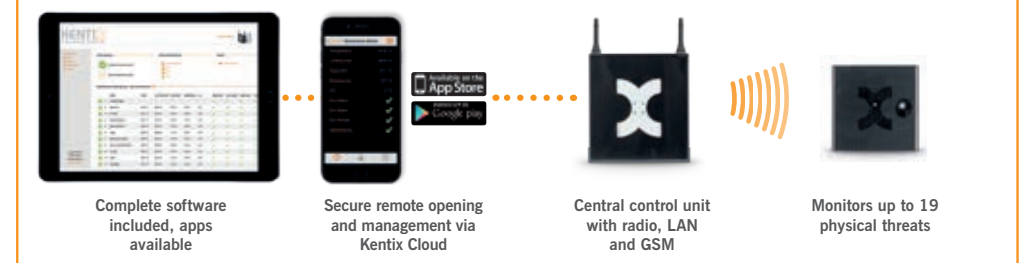

Possible applications:

- Server room, data center and IT cabinet
- Mission-critical infrastructure
- Industrial sites
- Office and administrative buildings

STARTERSET-PRO-1 - PROTECTS YOUR IT ROOMS IN ACCORDANCE WITH THE ISO 27001

The ingeniously easy Kentix MultiSensor® technology detects up to 37 physical threats with just one system.
