

All-in provider for solutions to protect mission-critical IT infrastructures

Kentix presents new 360° Smart Building Security concept

Idar-Oberstein, March 21, 2018 +++ Kentix, manufacturer of innovative Smart Building Security products for professional users, presents its new holistic concept. The portfolio includes products for environmental monitoring, online access control and power monitoring. If required, the IoT-based systems also integrate IP video cameras and can be remote controlled via the Kentix360 Cloud from anywhere and at any time. BSI baseline protection requirements and the ISO 27001 can be fulfilled easily with Kentix as well. This way, Kentix becomes a full-service provider for solutions to protect mission-critical infrastructures.

Innovation as a mission statement for integrated security solutions

All Kentix devices are IT-based and therefore offer an easy integration into IT environments as well as open interfaces. The integrated system solutions only require few components and no external software which saves cost and effort. The decentralized technical approach increases reliability and enables a very high scalability from small to large systems. If required, IP video cameras can also be integrated into the systems smoothly, therefore avoiding system breaks and always providing the system administrator with alarm-synchronic data. The direct, in-house technical support also offers added value. There are no licensing costs which lowers operating costs. Additionally, regular functional updates promise a long-term security of investment.

Merely unlimited application possibilities

The 360° Smart Building Security solutions by Kentix are suitable for the use in merely all business units, even where regulatory requirements for IT security must be fulfilled. Server- and IT rooms, critical areas and even distributed telecommunication systems can be secured all-round with Kentix. Nowadays, businesses from all branches of the economy must fulfill regulatory requirements such as the ISO 27001. For this purpose, Kentix systems offer integral solutions for the physical security of mission-critical infrastructures.

About Kentix:

Kentix is a manufacturer of professional Smart Building Security products for the physical security of mission-critical IT infrastructures. Our integrated security solutions include environmental monitoring, access control, power monitoring and IP video surveillance, completely remote controllable via Kentix360 Cloud and everything from a single source. In comparison with several single systems this saves a great deal of cost and effort. The use of wireless mesh networks and modern web technology enables fast and easy system integration. We put great emphasis on the easy usability of all our products which are exclusively manufactured in Germany according to highest quality standards.
