

Enhanced housing design and technical improvements

Kentix presents a new generation of MultiSensors

Idar-Oberstein, March 28, 2018 +++ Kentix, manufacturer of innovative Smart Building Security products for professional users, is starting the year in full force with a new holistic concept for 360° Smart Building Security. Well-trying products for environmental monitoring and online access control have been enhanced for this purpose. The new generation of MultiSensors offers an optimized housing design with plenty of advantages and technical improvements for a quick and easy installation.

AlarmManager in the Next Generation

The AlarmManager, the central control unit for the Kentix Smart Monitoring systems, now covers sites of up to 10.000 qm with up to 500 connectable MultiSensors. Moreover, a new and significantly improved Web GUI Ein neues und wesentlich optimiertes Web-GUI offers plenty of new features. The site administration across buildings and zones has been greatly simplified and a 3G modem was integrated. An alarm-synchronic video recording by IP cameras offers additional physical security. The videos are saved to an SD card and in case of an alarm, for example attempted sabotage, they are being sent to the system administrator via e-mail. Retrieving live video pictures via the smartphone app is also possible. Besides SNMP V2, the new AlarmManager now also supports SNMP V3 and communicates exclusively via HTTPS. Data in the log book and the history can be saved up to 12 months and the storage can be extended any time via a micro SD card. The AlarmManager is now supplied with power via PoE instead of an adapter. The VDS2465 communication with the alarm centers can be configured to an arbitrary number of lines. Also, a new I/O Module for analog inputs (KIO7017) now supports 0-10V/4-20mA.

Merely unlimited application possibilities

The 360° Smart Building Security solutions by Kentix are suitable for the use in merely all business units, even where regulatory requirements for IT security must be fulfilled. Server- and IT rooms, critical areas and even distributed telecommunication systems can be secured all-round with Kentix. Nowadays, businesses from all branches of the economy must fulfill regulatory requirements such as the ISO 27001. For this purpose. Kentix systems offer integral solutions for the physical security of mission-critical infrastructures.

About Kentix:

Kentix is a manufacturer of professional Smart Building Security products for the physical security of mission-critical IT infrastructures. Our integrated security solutions include environmental monitoring, access control, power monitoring and IP video surveillance, completely remote controllable via Kentix360 Cloud and everything from a single source. In comparison with several single systems this saves a great deal of cost and effort. The use of wireless mesh networks and modern web technology enables fast and easy system integration. We put great emphasis on the easy usability of all our products which are exclusively manufactured in Germany according to highest quality standards.
