

## ***IoT based security technology makes physical corporate protection easy*** **Kentix introduces integrated IT alarm and access system**

**Idar-Oberstein, August 24, 2018 +++ Kentix, manufacturer of innovative Smart Building Security products for professional users, presents its new integrated 360° security system at security 2018 in Essen. Through the consistent use of IoT technologies, the requirements for a modern IT based access and alarm solution can be met very easily.**

Kentix products have already secured critical IT infrastructures tens of thousands of times. The advantages of the systems are obvious. All system components can be flexibly networked via radio or cable (Ethernet), the software is embedded in the system and the distributed system architecture creates a high level of security. Through digitization, businesses are facing new challenges such as the connectivity of company divisions, the integration of several responsible persons up to security enterprises and the police as well as the integration into the IT administration. With traditional technologies, these challenges are difficult to master. This is where the new Kentix Smart Security solution comes in and fulfills the security requirements across all areas of the companies with intelligently networked solutions.

### **Consistently IT based and all threats monitored**

All Kentix devices are IT-based and therefore offer an easy integration into IT environments as well as open interfaces. The integrated system solutions only require few components and no external software which saves cost and effort. The decentralized technical approach increases reliability and enables a very high scalability from small to large systems. If required, IP video cameras can also be integrated into the systems smoothly, therefore avoiding system breaks and always providing the system administrator with alarm-synchronic data. The direct, in-house technical support also offers added value. There are no licensing costs which lowers operating costs. Additionally, regular functional updates promise a long-term security of investment.

### **Merely unlimited application possibilities**

The 360° Smart Building Security solutions by Kentix are suitable for the use in merely all business units, even where regulatory requirements for IT security must be fulfilled. Server- and IT rooms, critical areas and even distributed telecommunication systems can be secured all-round with Kentix. Nowadays, businesses from all branches of the economy must fulfill regulatory requirements such as the ISO 27001. For this purpose, Kentix systems offer integral solutions for the physical security of mission-critical infrastructures.

#### About Kentix:

Kentix is a manufacturer of professional Smart Building Security products for the physical security of mission-critical IT infrastructures. Our integrated security solutions include environmental monitoring, access control, power monitoring and IP video surveillance, completely remote controllable via Kentix360 Cloud and everything from a single source. In comparison with several single systems this saves a great deal of cost and effort. The use of wireless mesh networks and

modern web technology enables fast and easy system integration. We put great emphasis on the easy usability of all our products which are exclusively manufactured in Germany according to highest quality standards.
