

Physical Security for your digital World

Secure your Data Center
with just **ONE** system
and meet compliance requirements

Physical Security for your digital World

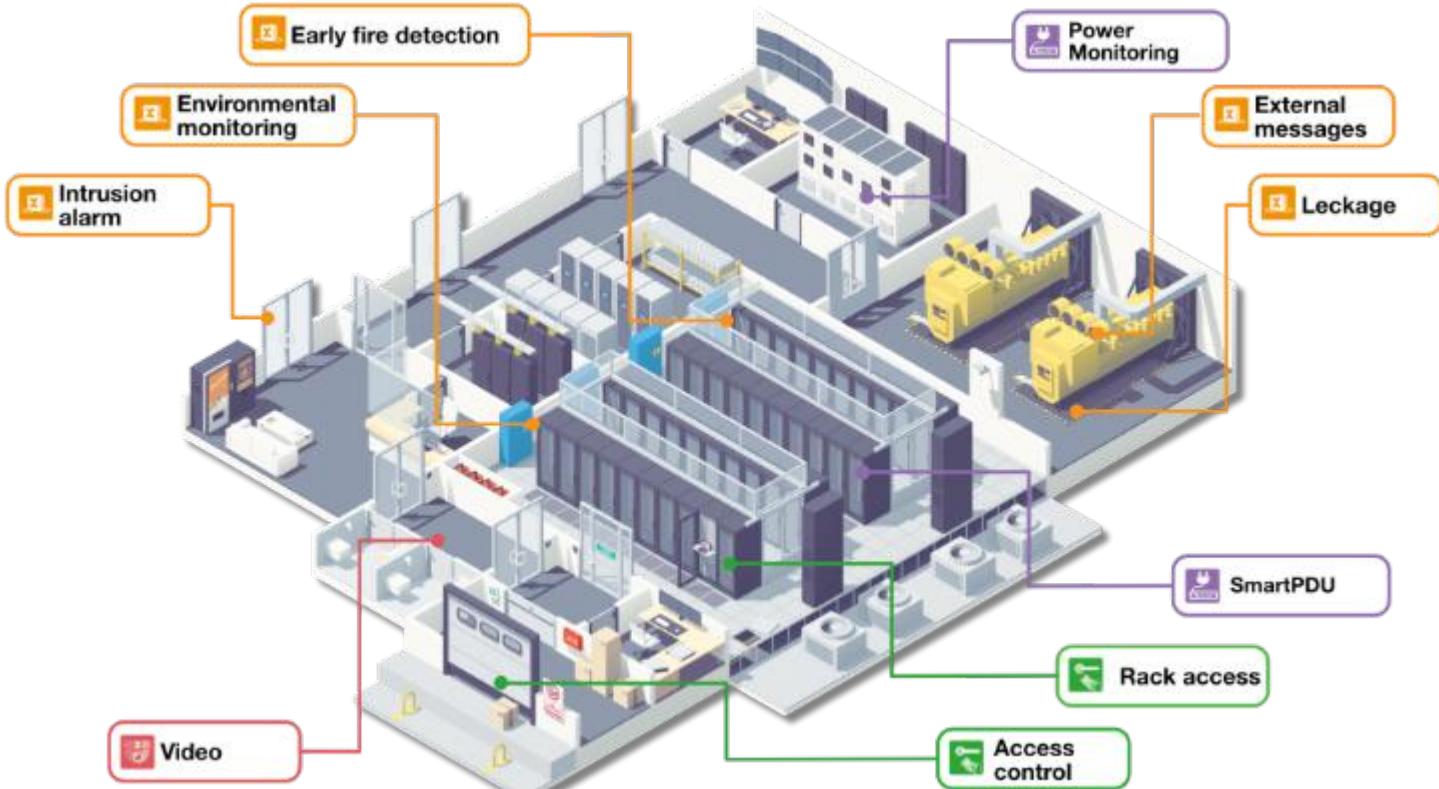

Security technology
goes simple
and digital

We give you more control

For Data Center from 5 - 5.000 sqm

As a data center specialist, you want to keep an eye on the physical environment of your data center without complication. You want maximum physical security at the lowest possible cost and effort. With KentixONE, the innovative software and hardware platform for physical security technology, you can easily secure your data center against more than 40 physical threats and at the same time meet important legal standards and basic protection requirements. Just one system automatically and proactively monitors your entire infrastructure and ensures EN 50600 (ISO 22237) or ISO 27001 compliance. Thanks to IoT technology, KentixONE can be seamlessly integrated, is uncomplicated to operate, is always perfectly compatible and can be expanded without limits. This gives you full control and averts threats before damage and loss occur.

These Systems are integrated in KentixONE

Physical Security for your digital World

100 % IoT-based for seamless integration

Access control

Not only knowing who - when - where, but also granting and revoking access authorizations in real time and from anywhere.

Environmental monitoring

Continuous monitoring of the prescribed environmental standards reliably prevents quality losses.

Intrusion detection

Immediate alarm in the event of a break-in or attempted break-in with a deterrent effect on offenders.

Live video

Everything in view with live video monitoring in real time. When an event is triggered, the camera automatically records.

Easy. Safe.
KENTIX|ONE

Power monitoring

Faults, interruptions or total failures are prevented thanks to real-time control of the energy conditions.

Network monitoring

Continuously monitors devices on the network and identifies errors before they become serious threats.

Early fire detection

Fires are one of the most devastating dangers for businesses. Early detection can identify them hours before they occur.

Physical Security for your digital World

**8 in 1
system**

Eight security systems merge into one seamless, intuitive solution: the KentixONE security platform. Access control, intrusion alarm, early fire detection, video monitoring, environment, power and network monitoring and the processing of external fault messages are all provided by a single system.

**40
threats**

More than 40 physical threats, such as burglary, fire, leakage, defective air conditioning or unauthorized access, are monitored automatically and proactively with just one system. This makes it very easy for the user to control imminent dangers - and simplicity creates more safety.

**100 %
IoT**

KentixONE is based on software defined hardware (SDH) and is a 100% IoT solution. As a result, all components fit seamlessly into the existing IT infrastructure and can be expanded without limits. Because outdated, incompatible security technology is yesterday's news. Security technology today must be smart and relieve the burden on people.

Benefits for your data center

Maximum physical security with minimum personnel expenditure

Lower capital expenditure (CAPEX) and operating costs (OPEX)

More future-proofing thanks to a perfectly compatible, unlimitedly expandable system

Physical Security for your digital World

Simplicity
is the key to
greater security

You want to secure your data center more effectively? We and our experienced partners are happy to help and advise you by phone or at your site.
